Art Unit: 3753

This action is responsive to the communication filed November 24, 2003.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4, 9, 29, 31, and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Zeller.

Zeller shows a filter with a rotary bypass valve 10, the passages in the valve constituting the inlet and outlet processing channels. The chamber 5 is threaded to the main body 7. A line connecting ports 15, 16 would be non-horizontal.

Claims 1-3, 8, 19-21, 25-30, 35-36 are rejected under 35 U.S.C. 102(b) as being anticipated by Sasaki et al.

Sasaki et al show a filter with a rotary bypass valve in Figure 2, where the body 6 is releasably connected to the main body and member 7 appears to be threaded to 6. Passages 54, 58 are read as the inlet and outlet processing channels.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zeller in view of Otto.

Zeller shows the claimed device except for the lever aligning with the inlet and outlet ports in the bypass position. Otto shows a similar valve with the lever so aligned. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have reversed the orientation of the Zeller lever in view of the teaching of Otto.

Claims 11-18 are allowed.

Claims 5-7, 22-24, 32-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
